

Application No.: 10/658,300

Docket No.: 030296

**Listing of Claims**

1. (Currently amended) An apparatus for providing electrical coupling, comprising:  
a motor having a hollow, rotational shaft for allowing electrical signals to pass there  
through and

an antenna horn rotatable about said shaft, said shaft being disposed coaxially with said  
horn on an axis of said horn which extends through a plane in which said antenna horn is  
rotatable.

2. (Original) The apparatus of claim 1, wherein said shaft comprises a conductor, the  
shaft for conducting electrical signals through said motor.

3. (Original) The apparatus of claim 1, further comprising an electrical conductor located  
within said shaft for providing said electrical signals through said motor.

4. (Original) The apparatus of claim 3 wherein the electrical conductor comprises a  
coaxial cable.

5. (Original) The apparatus of claim 3 wherein the electrical conductor comprises a  
rotational coupler.

6. (Original) The apparatus of claim 3 wherein the electrical conductor comprises a wire.

7. (Original) The apparatus of claim 1 wherein the shaft comprises a waveguide.

8. (Original) The apparatus of claim 7, wherein the shaft additionally comprises a  
waveguide coupler.

9. (Currently amended) The apparatus of claim [[1]] 3, further comprising a rotational  
coupler for coupling said electrical signals between a second conductor and the conductor.

Application No.: 10/658,300

Docket No.: 030296

10. (Currently amended) The apparatus of claim [[1]] 3 further comprising a platform connected to the shaft wherein the conductor is fixed with respect to the shaft.

11. (Currently amended) The apparatus of claim [[1]] 3 further comprising a platform connected to the shaft, wherein the conductor is affixed to the shaft and rotates therewith.

12. (Original) The apparatus of claim 3, wherein the coaxial cable comprises an outer conductor, a dielectric, and a center conductor, wherein the dielectric and the center conductor are fixed, and the outer conductor is fixed to said shaft.

13. (Original) The apparatus of claim 1, wherein said shaft comprises:  
a dielectric material within said shaft and affixed thereto; and a center conductor within said dielectric material.
